

The **SSV** Control Valve is the manufacturer offering the most comprehensive variation of Fisher compatible Control Valves in North America. **SSV** Control Valve has authentic design, knowhow, manufacturing and service technology with proprietary improvement endorsed by decades of site applications and customer approvals all over the world. **SSV** Control Valves' sizing and selection software is even an Engineering masterpiece marrying original Fisher software and our modifications with improvements for tomorrow's industrial applications. The combined strength in design, manufacturing, service, sizing and selection capabilities provide customer the perfect and swift interchangeability with Fisher Control valves and technical data confirmation from our very own state of the art flow lab.

SEVERE SERVICE VALVE INC

Highly reliable flow control technologies help you regulate and isolate your processes with certainty.

 CG200 Series	Configuration Single-port, globe-style, Angle-Style control valve with cage guiding, balanced or unbalanced valve plug	Rating Pressure ASME 150 ~ 600 Class Size Range 1" ~ 8"
 SG200 Series	Configuration Single-port, globe-style control valve , post guiding, unbalanced valve plug	Rating Pressure ASME 150 ~ 600 Class Size Range 1" ~ 4"
 MF300 Series	Configuration Single-port, globe-style control valve , post guiding, unbalanced valve plug	Rating Pressure ASME 150 ~ 600 Class Size Range 1/2" ~ 2"

Miniflow Miniflow is a trademark of SSV . Miniflow trims are used for micro-flow applications .

DFS DFS is a trademark of SSV . DFS trims are used for cavitating liquid applications .

Dunlap Dunlap is a trademark of SSV . Dunlap trim offers proven aerodynamic noise control that is effective for vapor/gas, or steam flow applications.

DFS I Cage

(reduce the noise level up to -40 dB(A)
For special applications, -50 dB(A
attenuation can be achieved)

DunlapIII Cage

SSV Noise Abatement Trims

SSV Multi-stage Anti-cavitation Trims

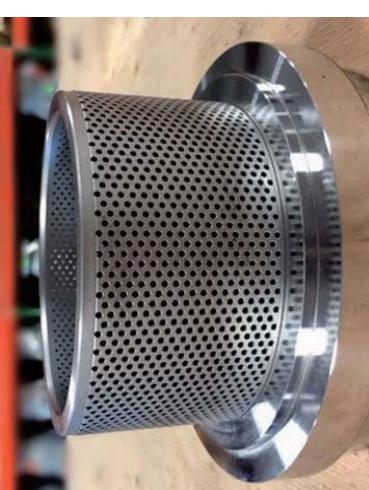

Standard Trim (1)	Standard Trim (2)	DFS Anti-Cavitation Cage
 <p>Standard trim for CG200</p>	<p>Features Inter changeable, restricted-capacity trims and full-sized trims to match variable process flow demands</p> <p>Post guiding provides valve plug stability with less chance of asticking valve plug due to non-lubricating or sticky process fluids or build-up of entrained solids. Post guiding stabilizes the valve plug at all points in its travel range to reduce vibration, mechanical noise, and trim wear.</p>	<p>Features DFS I trim can lengthen valve service life and reduce maintenance downtime. The shape and spacing of holes in the cage wall circumference helps prevent cavitation in a properly sized valve, effectively controlling or helping to eliminate(depending upon service conditions) cavitation damage and resulting valve failure.</p> <p>Consult your SSV sales office for additional information.</p> <p>Standard hardened trim materials provide excellent wear resistance, resulting in long trim life. The contoured valve plug seat reduces fluid separation, helps direct fluid away from trim, and helps protect against erosion damage.</p>
 <p>Standard trim for SG200</p>	<p>Features Inter changeable, restricted-capacity trims and full-sized trims to match variable process flow demands</p> <p>Flow-straightening,vaned seat ring is available in full port and first reduction port sizes. It offers excellent open- and closed-loop performance and may be used as a direct replacement for the non-vaned seat ring.</p>	<p>The process fluid flows through the trim, flushing away solid deposits above and below the guide bushing, thus reducing the possibility of a sticking valve plug.</p> <p>Available SG200</p> <p>Available CG200 ; CG201 ; CG210 ; CG211 ; DFS900 ; DFS901 ; DFS910 ; DFS911 ; DFS903 ; GF1000</p> <p>Available CG200 ; CG201 ; CG210 ; CG211 ; DFS900 ; DFS901 ; DFS910 ; DFS911 ; DFS903 ; GF1000</p> <p>Available CG200 ; CG201 ; CG210 ; CG211 ; DFS900 ; DFS901 ; DFS910 ; DFS911 ; DFS903 ; GF1000</p>

Dunlap II B3 Cage	Dunlap II Noise Abatement Cage
Dunlap I Cage	Dunlap I Noise Abatement Cage
DFS II Trim	DFS II Anti-Cavitation Trim
 <p>Dunlap II B3 Cage</p>	<p>Features Use of a Dunlap II cage in a properly sized valve can result in a noise reduction up to 30dBA compared to the same valve with standard trim. Such a reduction would be similar to the reduction in noise level noticed when moving away from the noise source 94m (308 feet)</p> <p>Use of a Dunlap II cage provides excellent noise reduction and high flow capacity with the proven control and durability offered by standard SSV valve trims. The result: optimum overall performance at a minimum investment.</p> <p>Hardened materials of construction are standard to provide exceptional wear resistance. For more information about trim materials, see the appropriate valve body bulletin.</p> <p>Consult your SSV sales office for additional information.</p>
 <p>Dunlap I Cage</p>	<p>Features The Dunlap I cage offers excellent noise reduction and high flow capacity.</p> <p>Use of a Whisper Trim I cage in a properly sized valve can result in up to 18 dBA noise reduction compared to the same valve with standard trim. An 18 dBA reduction in noise represents approximately 98 percent reduction in sound intensity. This is similar to moving away from the noise source by 24m (78 ft).</p> <p>Consult your SSV sales office for additional information.</p>
 <p>DFS II Trim</p>	<p>Features Designed to prevent cavitation.</p> <p>Has a pressure drop limit of 552 bar (8000 psi).</p> <p>The protected seat design separates the shutoff function from the throttling function to protect seating surfaces from throttling wear.</p> <p>Hardened trim materials provide excellent wear resistance, resulting in long trim life.</p> <p>Soft metal-to-metal seat provides tight shutoff without the need for periodic lapping.</p> <p>Consult your SSV sales office for additional information.</p> <p>Available Customizable</p>

 <p>Minflow-M4 Trim</p>	<h3>Minflow Trim (M4)</h3>	<p>Features Minflow-M4 trim is a plug-characterized design with a series of flats on a common stem to provide staged cavitation control. Flow direction is typically flow down, but flow up use is possible in special cases. Consult your SSV sales office for additional information. This trim is used to eliminate cavitation. Features include a protected seat design and pressure drops in excess of 4000 psi. To maximize seat life in cavitating environments, staged flow control as low as Cv = 0.01 is possible. This trim must be used with hardened materials, such as R30006/CoCr-A and S44004.</p>
 <p>Minflow-M2 & M3 Plug</p>	<h3>Minflow Trim (M2 & M3)</h3>	<p>Features Minflow-M2 trim is for low flow equal percent control applications. Standard trim material is R30006/CoCr-A and S44004. Minflow-M2 trim is port guided. The plug tip rides in the seat ring, which is the area where energy is dissipated. Typical applications are port diameters as small as 0.25 inch and flow up (with some flow down applications).</p> <p>Minflow-M3 trim provides linear ultra low flow control in gas and liquid applications. Typical application for this trim is flow up, 0.1875 inch port diameter, and 0.75 inch travel. This is a very rugged, tough trim and therefore available in limited materials, such as R30006/CoCr-A. Minflow-M3 Flow trim construction consists of a very tightly controlled angle milled on a flat. This low angle flat provides the required flow control. This unbalanced trim, with a linear plug characteristic.</p>
 <p>Minflow-M1 Trim</p>	<h3>Minflow Trim (M1)</h3>	<p>Features Minflow-M1 trim is a contoured plug, equal percent trim for low flow applications. This plug characterized trim is available in 0.25 inch and larger ports. Minflow M1 trim is used in flow up applications and not recommended for flow down use. Depending on valve type, this trim is either cage-guided, stem-guided, or post-guided .</p> <p>Available MF300 ; DFS901 ; DFS911</p>
